# IJYI Continuous Technical Improvement (CTI) Assessment

Maximise your systems potential

IJYI's CTI Assessment is a comprehensive framework designed to improve the quality, business value and level of risk of your systems by assessing their cost efficiency, security & compliance, reliability, performance efficiency and operational excellence.

By leveraging the Cloud Well-Architected Framework, combined with IJYI's expertise in solution design and operations, the CTI Assessment offers valuable insights and identifies areas of business risk.

Benefits:

- Optimal resource utilisation and cost savings
- Enhanced system robustness
- Improved reliability and minimised downtime
- Strengthened security and compliance adherence
- Personalised recommendations for maximum return on investment

The CTI Assessment empowers businesses to strengthen the sturdiness of their systems by identifying areas of improvement and implementing best practices.

The CTI Framework

Set to improve the quality of your systems, the CTI Framework consists of five pillars of architectural excellence:

- **Performance Efficiency**: A system can adapt to changes in demand
- **Reliability**: Ability of a system to recover from failure
- **Operational Excellence**: Workloads are run effectively, and able to gain insight into their operation
- **Security & Compliance**: Protecting systems & data from threats
- **Cost Optimisation:** Ability to run systems to deliver business value at the lowest cost point
